

Developmental Pharmacology Short course

Course coordinator :
Pr Evelyne Jacqz-Aigrain
Assistance Publique - Hôpitaux de Paris
France

This course will present the key aspects of developmental pharmacology, covering the impact of growth and maturation on drug disposition, effects on dosage selection and evaluation in the different paediatric age groups

Enrol now! Course closes 22nd October 2021

Target Audience: All professionals involved in paediatrics and paediatric drug development including but not limited to investigators, clinicians, nurses, regulators and research technicians.

Time Commitment:
6 hours (14x 20-30
min online modules)

Learning objectives:

- To understand how and why paediatric clinical trials differ from adult clinical trials in many pharmacological aspects
- To gain knowledge of how to design and deliver trials adapted to children
- To explore how to generate data and validate drugs adapted to the different paediatric age groups
